

# Quality Measure Improvement Guide for **Pain**

**Problem:** Pain—and the suffering that defines it—reduces quality of life and can impede treatment of other conditions. As a pervasive aging problem, it’s one of ten quality measures (QMs) in the Centers for Medicaid & Medicare Services (CMS) Five-Star Rating. Your nursing home’s quality performance in pain management is evaluated in this CMS regulation:

**F309** Each resident must receive and the facility must provide the necessary care and services to attain or maintain the highest practicable physical, mental, and psychosocial well-being, in accordance with the comprehensive assessment and plan of care.

**Intent §483.25:** The facility must ensure that the resident obtains optimal improvement or does not deteriorate within the limits of a resident’s right to refuse treatment, and within the limits of recognized pathology and the normal aging process.

**Solution:** Briggs has assembled the precise documentation, charting, education and training materials, and medical supplies you’ll need to achieve CMS goals related to pain control—and enhance your residents’ quality of life. Remember, every Briggs form integrates industry best practices and has been recognized by customers as best-of-class.

**Get the Right Solutions—Now!** >>>

The sooner you implement the right solutions for effective pain control, the sooner you can see your Five-Star quality ratings improve.
